

## What Goes In?

Put your garden waste!

Put your food waste - even bones!

Put this and much, much more!

### Put kitchen peelings

Put your fruit and vegetable peelings.

### Put garden waste

Put grass cuttings, autumn leaves and garden pruning.

### Compost all food waste

Add **IN** left-over meals, scrapings, meat and fish, bones, bread and cakes.

Food waste needs to be mixed with bulking agent to maintain air flow through the HOTBIN.

## Garden Organic

HOTBIN was tested by Garden Organic at Ryton Gardens for its ease of use, effectiveness and compost quality.

"The HOTBIN processed a very challenging food waste mix into compost after 90 days. During the trial we were really impressed that when checking the temperature it read 60°C when the outside temperature was around 10°C."

The trials highlighted little odour, virtually no flies or problems with rodents - all usual major concerns with compost bins.

More reviews are available to read online.

## Ready to Buy?

Basic or with Extras? Choose your HOTBIN model.

**BASIC**  
£165

**INCLUDES**  
Cam straps  
Lid thermometer

# COMPOST IN JUST 30-90 DAYS

THE COMPOST BIN THAT **REALLY** WORKS  
you can put **MORE** in the HOTBIN

# Less Waste To Landfill and Create Compost Fast.

Perfect for the garden,  
Perfect for the environment!

## Benefits

- Compost in 30-90 days
- Compost times faster
- Composts bones
- Online/offline support
- no forking, tumbling, turning
- bio-filter reduces odours
- kills weed seeds & pathogens
- kills fly eggs and larvae

## HOT Composting?

Hot organic compost fast - typically mulching in 30 days, cold compost in 90 days. That's **32 times faster** than cold composting - a great solution to overflowing compost bins.

At temperatures of 40-60°C you can compost a wider range of waste in the HOTBIN all year round without the cold composting concerns of pests and a stinky heap.

The HOTBIN is a compost bin that really works!

## HOTBIN Deconstructed

The HOTBIN comes in one size (200 litre unit), which includes as pictured (Basic model) a lid thermometer and a set of cam straps.

**Weight:** 8kg (when empty)  
**Capacity:** 200 litres  
**Wall Thickness:** 50mm  
**Material:** EPP - 100% recyclable

**Please note:** The HOTBIN is **not** rat proof. Vermin experts will confirm that rats eat through almost anything. The HOTBIN successfully reduces the attraction of vermin by minimising odours.

## Where Can My HOTBIN Go?

On any flat surface, in sun or shade, on soil, grass, paving or patio.

## Do I Need Bulking Agent?

Yes. Bulking agent (wood chip) keeps the waste aerated ensuring the bacteria get the oxygen they require for fast and efficient hot composting. This should be added to wet waste and can be purchased from ourselves or from your local garden centre. Please note paper should not be used as a substitute.

## How Much Waste Do I Need?

Add waste to the HOTBIN once or twice a week. A minimum of approximately 5kg is needed every week to keep it hot.

## Basic or Would You Like Extras?

The Basic HOTBIN model (£165) includes a lid thermometer and set of cam straps as standard, the Extras model (£185) includes the following items to help you get you started.

Internal thermometer for more accurate internal temperature measurement

25 litre bag of bulking agent to keep waste aerated

waste raking stick to mix top waste layer and remove compost

winter kick-start bottle heater to get the HOTBIN started in the cold
